

A05

SAFE WORKING ON STEEP AND UNSTABLE SURFACES

This 'stand-alone' course aims to equip trainees with the necessary skills to access a range of steep surfaces safely and efficiently. Examples of this type of environment include vegetation research, rhododendron management, grass cutting, scrub clearance and tree felling.

Why Treepartner Training?

- *2:1 trainee to instructor ratio*
- *Delivered by instructors with extensive and current experience*
- *Tailored to individuals or groups*
- *Can incorporate a wide variety of surface types*
- *Uses a wide range of the latest equipment*
- *Addresses the requirements of the Work at Height Regulations, including working with two independent fall protections systems*
- *Can incorporate the management and use of a range of cutting tools including: handsaws, loppers, extendable hand tools, battery powered/petrol driven chainsaws, trimmers, and brushcutters (depending on trainees pre-existing competencies)*

This 3 day course will cover the following topics:

- Legislation
- Risk Assessment
- PPE and First Aid Provision
- Managing steep ground operations
- Site zonation
- Communication
- Climbing system selection, inspection, and system design
- Establishing suitable anchors including implementation of suitable edge protection solutions
- Set up and operation of a range of lowerable descent/ascent and work positioning systems
- Rescue planning and techniques to include lift, lower and pick-off methods
- Working with tools on steep ground
